

Name _____

Date _____

THE POLAR BEAR

The polar bear makes its home in the cold and icy Arctic. Other animals might freeze or starve. But the polar bear knows how to live in the snow.

Polar bears have thick blubber, or fat, that protects them from the cold. They also have a thick fur coat.

The polar bear's coat is white. This allows it to blend into the snow. That way, the polar bear can sneak up on its prey.

Polar bears swim well. They eat seals, walruses, small whales, and rodents. In the summer, they may eat berries.

Polar bears will also eat people. They may look cute and furry, but be careful of this big bear!
